ACME POWER
Charger overview sheet

Introduction

The charger supervises the power stage and the vehicle interface and reports the values over the internal bus every ten milliseconds, as long as a vehicle is connected and the safety controller has released the output contactor of the power stage.

Scope

The charger supervises the power stage and the vehicle interface and reports the values over the internal bus every ten milliseconds, as long as a vehicle is connected and the safety controller has released the output contactor of the power stage.

Limits

The charger supervises the power stage and the vehicle interface and reports the values over the internal bus every ten milliseconds, as long as a vehicle is connected and the safety controller has released the output contactor of the power stage.

Details

The charger supervises the power stage and the vehicle interface and reports the values over the internal bus every ten milliseconds, as long as a vehicle is connected and the safety controller has released the output contactor of the power stage.

Wiring

The charger supervises the power stage and the vehicle interface and reports the values over the internal bus every ten milliseconds, as long as a vehicle is connected and the safety controller has released the output contactor of the power stage.
